

Wealth of Vascular Plants of Avani Seeds Vidhya Sankul, Mehsana, Dist. Mehsana, North Gujarat, India

Dr. Ashokkumar H. Patel

Associate Professor, Botany Department, Municipal Arts & Urban bank Science College,
Mehsana (N. G.)

ABSTRACT

The present study was aimed at determining the vascular plant species richness of the Avani seeds vidhya-sankul, Mehsana campus. For this, the species richness data was obtained by both secondary sources and intensive surveys from 2020-2022. Campus is extended over 8 acres of land. The campus area are the representative of climax vegetation and exhibit the diversity of species such as trees, shrubs, herbs, climbers and other shade loving herbs. Botanical gardens have valuable medicinal and other plants having high economic value. The data from the primary and secondary sources resulted in the documentation of 284 species belonging to 239 genera under 86 families. Leguminosae and Poaceae were the dominant dicotyledonous and monocotyledonous families respectively. 96% species are belonging angiosperms plants and *Zemia pygmaea* Sims is a rare plants belonging gymnosperms in campus.

Keywords: Sardar Vidyabhavan Trust (SVT), Avani seeds vidhya-sankul campus, Angiosperm, Gymnosperm and Pteridophyte.

INTRODUCTION:

Campus established in 1964 by Sardar Vidyabhavan Trust is one of the leading colleges of North Gujarat. The campus is presently managed by Sardar Vidyabhavan Trust, Mehsana under the exemplary leadership of a well-known politician, a renowned industrialist and a four-sighted educationist named Lt. Shri Anilbhai T. Patel, the former Chairman of Sardar Vidyabhavan Trust (SVT), Mehsana as well as Apollo Group of Industries, Mehsana two years back, the college is presently managed by the same trust under the chairmanship of a renowned politician named Shri Arvindbhai T. Patel and the holy leadership of an industrialist and managing trustee Shri K. K. Patel and the devoted trustees as well as Shri. Jaytibhai S. Patel. Sardar Vidya Bhavan Trust today know as Avani seeds vidhya-sankul, its runs four colleges which are Municipal Arts and Urban Bank Science College, Shri V. R. Patel College of Commerce, Swami Vivekanand Sarvoday Bank College of Education, M. Ed college and Shri S. M. Shah Law College. The campus have richness of plants.

The richness of flowering plants makes India one of the mega diversity countries in the world with four biodiversity hotspots and three mega centers of endemism. India ranked seventh among 17 mega diversity countries of the world. and more than 17,000 species of higher plants are reported to India (Anonymous 1993, Shiva 1996). Our campus having Environmental culture and developing new ideas in campus for creating sustainable solutions to environmental, social and economic needs of the mankind.

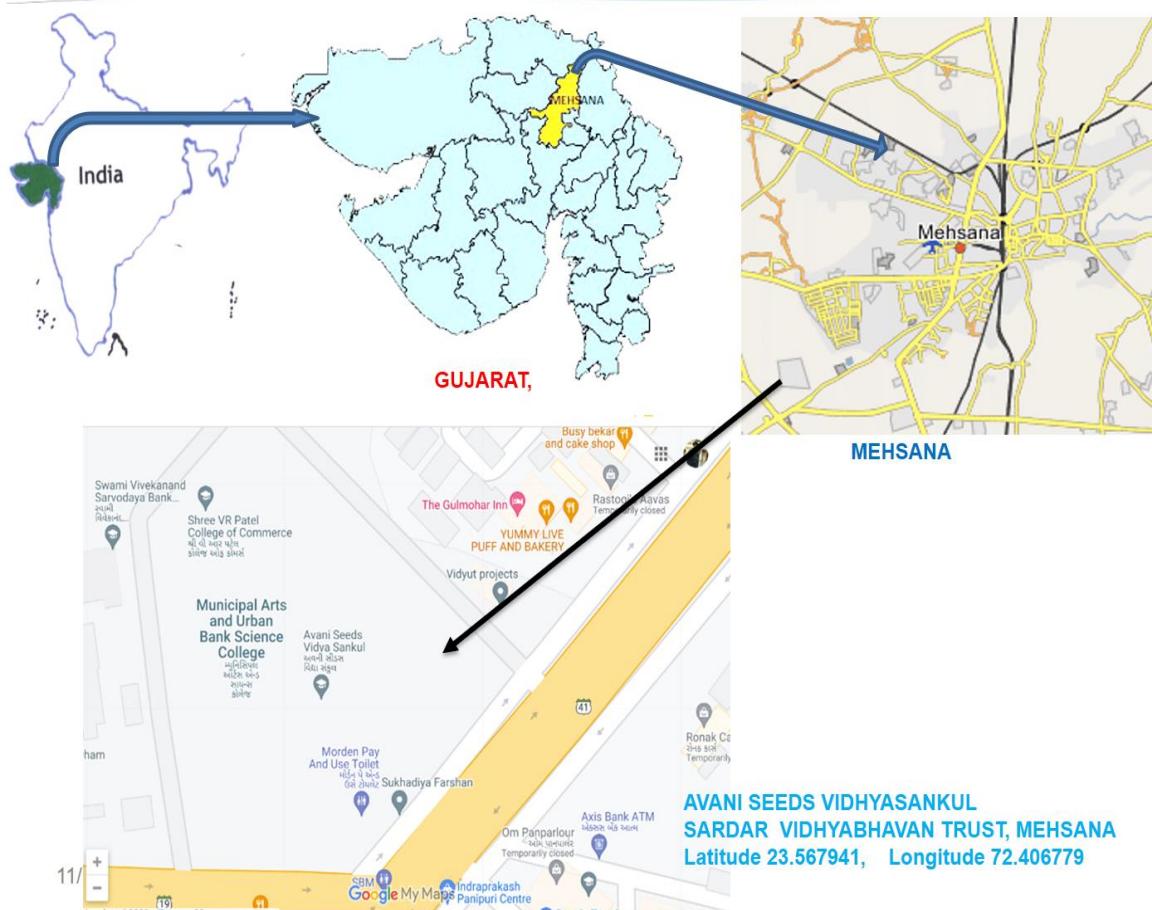

Campus having various area like playground, garden and Botanical garden and road sides, its having good vegetation. Gardens of college campus which is communally protected and which usually have a significant religious connotation for the protecting community. Also Ethnobotanical aim to document, describe and explain complex relationships between cultures and uses of plants: focusing, primarily, on how plants are used, managed and perceived across human societies (e.g. as foods; as medicines; in divination; in cosmetics; in dyeing; as textiles; in construction; as clothing; in literature; in rituals; and in social life). Some ornamental plants are decorative and giving beatification to the campus.

In the present work is designed with an objective to study the vascular plants, floristic diversity and documentation of campus flora.

STUDY AREA:

The college is located in Mehsana on the National Highway that connects all the major parts of Gujarat and Rajasthan including Delhi and northern states of India. The area is bounded by the Mehsana city. It is situated in western region of town. It is classical example of 4 directional Gate with Temple at Main entry gate. The land surface attains a maximum altitude of 409 m (1,342 ft.) above mean sea level. 23° 36' 0" N, 72° 24' 0" E. Mehsana is well-known for The Milk City and The Oil City as well. It takes pride in having one of the biggest dairies of India named "The Dudh Sagar Dairy" which has brought about the white revolution in the North Gujarat region. The O.N.G.C. Project, situated in the vicinity of Mehsana district, has also made a significant contribution to the development of the city.

Location and Map of Campus

METHODOLOGY:

Floristic studies were carried out in the College campus during 2019-2021. An extensive field survey was initiated from July 2019 onward to collect the various vascular plant species growing on the main campus. During survey, visits were made to every nook and corner of the campus including the playground to search the vascular plant species. Collecting the plant species and data in different seasons. All habitats of the study area surveyed carefully. Plant collection carried out by standard method (Jain and Rao, 1977). Identification of plants done with the help of flora (Cook, 1903; Hooker, 1872-1897; G. L. Shah, 1998) and other taxonomic literature. The plants were collected season wise and during the collection photographs were taken. The vascular plant species were listed into three groups i.e. Angiosperms, Gymnosperms and Pteridophytes (Non-seed producing vascular plants).

RESULT & DISCUSSION:

An extensive plant survey was carried out in our College campus during 2019-2021. The campus shows rich Floristic diversity in respect to the distribution of vascular species, genera and families of Angiosperms, Gymnosperms and Pteridophytes. Table-4 indicates a list of vascular plants which are found in campus. During the survey more than 284 plants were collected and identified from campus. Out of total 284 plants 278 species, 233 genera, 8 families are belonging to angiosperm plants while 03 species, 03 genera and 03 families are belonging to gymnosperm plants and 03 species, 03 genera, 03 families are belonging to Pteridophyte plants. Out of 278 Angiosperm plants 217 species, 188 genera and 68 families belonging to dicotyledonous while 61 species 45 genera and 12 families belonging to monocotyledons (Table-1). This results shows good wealth of campus after monsoon season, then destruction of some herb species was start as a result in summer campus having poor wealth. Due to various factors the vegetation of the campus has caused rapid destructions of habitats of the plants. The various factors such as changing environmental conditions, biotic factors, destruction of habitat etc. biotic factors, destruction of habitat some plant species facing threats for their existence.

There are 112 wild and naturalized species and 172 Ornamental species in the campus. Angiosperms was dominant plants group in campus, from this Fabaceae, Araceae, Euphorbiaceae and Poaceae were the dominant dicotyledonous and monocotyledonous families respectively, and gymnosperm and pteridosperms presenting with 3-3 species in campus.

Table- 1. Vascular plant wealth in the campus.

Vascular plants	Families	Genera	Species
Angiosperm	80	233	278
Gymnosperm	3	3	3
Pteridophyte	3	3	3
TOTAL	86	239	284

Table:- 2. Vascular plant analysis of class, sub class in the study area.

Class	Sub Class	No. of Families	No. of Genera	No. of Species
DICOTYLEDONS	Polypetalae	41	91	107
	Gamopetalae	20	72	83
	Monochlamydae	7	25	27

	TOTAL	68	188	217
	Percentage	79.07%	78.66%	76.41%
	MONOCOTYLEDONS	12	45	61
	Percentage	13.95%	18.83%	21.49%
	GYMNOSPERMS	3	3	3
	Percentage	3.49%	1.26%	1.06%
	PTERIDOPHYTE	3	3	3
	Percentage	3.49%	1.26%	1.06%
	TOTAL	86	239	284

A list of dominant families of the study area has been prepared. The table - 3 shows the position of different families in the study area and their respective positions in order of dominance. Among diocots Fabaceae and Araceae occupy highest position (17 species) and monocots Poaceae occupy highest position (14 species). The table below gives the account of ten dominant families in the study area. The largest family being Leguminosae with 33 species (Fabaceae + Caesalpiniaceae and Mimosaceae).

Table:- 3. Dominant species and genera recorded in the Campus.

SR. NO	FAMILY	GENERA	SPECIES
1	FABACEAE	16	17
2	ARACEAE	16	17
3	EUPHORBIACEAE	10	15
4	POACEAE	12	14
5	ASTERACEAE	14	14
6	CAESALPINACEAE	7	14
7	CONVOLVULACEAE	7	11
8	ACANTHACEAE	7	7
9	VERBINACEAE	5	7
10	MALVACEAE	5	7

Table:- 4. Vascular plants species and genera recorded in the campus.

Table:- 5. ANALYSIS OF ETHNOMEDICINAL DATA

Sr. No.	Name of the Family
1	Meliaceae
2	Fabaceae, Papilionaceae
3	Solanaceae
4	Asclepiadaceae
5	Cucurbitaceae

Looking to the applications of the plant species with reference to their families, it is observed that 5 families have more than 10 applications. A list of families with the total number of applications is given in the Table.

Conclusion

It can be concluded from the study that Avani seeds vidhya sankul campus is rich in vascular flora dominated mostly by Angiosperms. Fabaceae, Araceae and Poaceae are the dominant families of the campus flora. But only 06 plants of gymnosperms and pteridophyta in the campus. Flora of herbaceous habit dominates over the other habit forms.
