Abstract
In today's rapidly evolving global economy, the concept of balance in work-life has emerged to a specific and critical determinant of employee satisfaction, productivity, and overall organizational success. Defined as the symmetry between responsibilities of profession and commitments to personal life, achievement of necessary balance in work and life for sustaining physical health, mental wellbeing, and social fulfilment. In recognition of its significance, policymakers and employers worldwide have increasingly prioritized initiatives aimed at promoting balance in work & life balance and enhancing wellbeing of employee at the workplace.

To the core of efforts to facilitate work-life balance are labour laws - the legal frameworks that govern the rights, obligations, and protections of workers. Spanning a broad spectrum of areas including employment contracts, working hours, wages, occupational health and safety, and leave entitlements, labour laws fulfil a major role in shaping the dynamics of the employment relationship and the broader labour market. However, amidst the complexities of modern work environments and the evolving needs of employees, questions persist regarding the effectiveness of existing labour laws in promoting work-life balance and safeguarding employee wellbeing.

This research endeavours to address these questions through a comprehensive examination of the effectiveness of labour laws in promoting work-life balance and employee wellbeing. Drawing upon multidisciplinary perspectives from law, sociology, psychology, economics, and public policy, this study aims to explore the complexities and nuances inherent in the regulation of work-life balance within contemporary workplaces. By synthesizing existing literature, empirical evidence, and stakeholder perspectives, it seeks to provide a holistic understanding of the challenges, opportunities, and implications of labour laws for balance in work & life balance and in wellbeing of employee.

The importance of the current research lies in its potential to inform policy debates, guide organizational practices, and in contribution to the broader discourse on work-life balance and in wellbeing of employee. By critically evaluating the implementation, enforcement, and impact of labour laws across different jurisdictions and industries, this study seeks to identify strengths, weaknesses, and areas for improvement within existing legal frameworks. Moreover, it aims to explore the intersectionality of labour laws with other factors influencing work-life balance, including organizational cultures, technological advancements, socio-economic trends, and cultural norms.

Through a structured and rigorous methodology, this research will encompass a series of interconnected stages. First, it will undertake a comprehensive review of existing literature, examining theoretical frameworks, empirical studies, and case examples pertaining to labour laws and work-life balance. The
below mentioned review of literature will serve as the foundation for subsequent empirical analyses, providing deep comprehending description into the evolving landscape of balance in professional life and personal life regulation & its implications for employee wellbeing. By examining the evolution and enforcement of labour laws, it will seek to identify patterns, trends, and variations in the promotion of work-life balance and in wellbeing of employee. Additionally, it will explore the role of stakeholders such as policymakers, employers, trade unions, and advocacy groups in shaping labour law reform and implementation.

Building upon this contextual understanding, this research will then proceed to empirical investigations aimed at assessing the effectiveness of labour laws in promoting work-life balance and employee wellbeing. Through surveys, interviews, and quantitative analyses, it will gather data on various aspects of balance in professional life and personal life, including countable hours of working, policies of leave, telecommuting arrangements, and access to support services. By examining the perceptions, experiences, and outcomes of employees subject to different labour law regimes, it will seek to identify patterns of compliance, non-compliance, and their implications for employee wellbeing.

Furthermore, this research will explore the broader implications of labour laws for organizational practices and societal outcomes. By examining the relationships between labour laws, organizational cultures, employee engagement, and productivity, it will seek to elucidate the mechanisms through which legal frameworks influence balance in professional life and personal life and wellbeing of employee.
EMPLOYEE WELLBEING:
Employee wellbeing encompasses the holistic health and happiness of individuals within the context of their work environment. It transcends mere physical health to encompass mental, in professional and personal life, supportive work environments, and access to resources and opportunities for personal and professional development. Organizations that prioritize employee wellbeing tend to foster a culture of care, trust, and mutual respect, leading to the employee's varied levels of engagements, productivities and retentions.

Organizational success:
Organizational success is the culmination of effective leadership, strategic vision, and operational excellence, manifested in the achievement of strategic objectives and the realization of organizational goals. It is characterized by sustained growth, profitability, and resilience in the face of challenges and uncertainties. Organizational success hinges on various factors, including innovation, customer satisfaction, employee engagement, and adaptability to changing market conditions. Moreover, it is intrinsically linked to organizational culture, values, and practices that prioritize ethical conduct, social responsibility, and the wellbeing of stakeholders.

SOCIAL JUSTICE:
Social justice encompasses the principles of fairness, equity, and inclusivity in distributing resources, opportunities, and rights within society. It involves acknowledging and rectifying disparities and injustices based on factors like race, gender, socioeconomic status, and ability. Social justice advocates for policies and practices that facilitate equal access to opportunities and eliminate barriers to full participation in society. It is crucial for nurturing a society that embraces diversity, upholds human dignity, and ensures that everyone has the chance to realize their potential and live meaningful lives.

ECONOMIC SUSTAINABILITY:
Economic sustainability involves managing economic activities and resources in a manner that promotes long-term prosperity while safeguarding the environment and meeting the needs of future generations. It encompasses principles of responsible resource management, equitable distribution of wealth, and inclusive economic development that benefits all members of society. Economic sustainability requires balancing economic growth with social and environmental considerations, ensuring that economic activities are conducted in a manner that preserves natural resources, protects ecosystems, and promotes social equity and cohesion.

JOB SATISFACTION:
The satisfaction in job explains the subjective feeling of contentment and accomplishment that individuals derive from their work and work-related experiences. Various influencing factors include the nature of the work itself, working ambience, alliance in between colleagues and supervisors, and growth opportunities and advancement. The satisfaction in jobs is a critical determinant of engagement in employees, retentions, and performance, as employees who are satisfied tend to be more committed, motivated, and productive in their roles.
BURNOUT:
The state where employees undergo exhaustion physically, emotionally, and mentally resulting from prolonged exposure to pressure and high levels of job results is termed as Burnout. It is characterized by feelings of fatigue, cynicism, and reduced efficacy, and can have detrimental effects on individual wellbeing and organizational performance. Burnout often arises in work environments characterized by excessive workload, lack of autonomy, and inadequate support systems, and can lead to decrease in productivity, increase in absenteeism, and higher rates of employee turnover.

REVIEW OF LITERATURE
CONNIE ZHENG, JOHN MOLINEUX, SOHEILA MIRSHEKARY, SIMONA SCARPARO, 7 APRIL 2015
The researchers discovered that individuals who implement their own Work-Life Balance (WLB) techniques demonstrate improved health and well-being compared to those who do not. Additionally, they exhibit a greater ability to attain WLB. Interestingly, while the presence and utilization of organizational WLB initiatives were linked to reduced stress levels among employees, they did not directly correlate with Personal-Professional Life Balance and the health of employee. Moreover, various control variables including their age, hours of working, educational status and income were identified as having medium level impacts on health of employee and well-being.

PHILIPPA YASBEK, JANUARY 2004
In last 10 years of frame, notable surge in both the quantity and quality of evidence supporting the business advantages associated with professional-personal life balance policies was noted. Various studies demonstrate robust correlations between such policies and reductions in absenteeism, as well as enhancements in productivity. A foundational step for organizations in evaluating the economic dynamics of professional-personal life balance policies involves the thorough identification of all associated costs and benefits. While quantifying the net impact of these policies may pose challenges, compiling this information offers a more comprehensive understanding of their implications. Certain work-life balance policies entail minimal costs but can yield significant returns, either immediately or in the long term. Therefore, it's crucial to evaluate all policies collectively, recognizing potential synergistic effects that arise from their combination. It's plausible that the benefits, which are often more difficult to quantify, might be underestimated, while the costs, being more tangible, could be overestimated. Consequently, this tendency may foster in general negative perception regarding the overall effect of implementing professional-personal life balance policies.

CONNIE ZHENG KIA KASHI DI FAN JOHN MOLINEUX & MONG SHAN sEE, MARCH 2015
This study examines how individual coping strategies and organizational events related to professional and personal life balance impact the emotional well-being of 700 Australian employees. A specific equation modelling revealed that employees with optimistic attitudes and effective amiable strategies experienced higher overall development. Interestingly, while both materialistic and non-materialistic professional and personal life Balance provisions by organizations showed no direct link to employee well-being, they indirectly influenced wellbeing through individual coping strategies. Moreover, the study found that individual efforts played a more significant role in enhancing employee well-being compared
to organizational initiatives in providing WLB programs. These findings underscore the importance of individual coping strategies in achieving well-being, with organizational WLB programs acting as facilitators rather than direct contributors.

LAZAR, IOAN OSOIAN, CODRUTA RATIO, PATRICIA IULIA, 2010
Acknowledged as crucial in contemporary business environments, the concept of professional and personal life Balance underscores the importance of managing both professional and personal responsibilities effectively. This notion has gained prominence in response to shifts in demographics, economics, and cultures. This paper aims to ascertain whether initiatives promoting work-life balance should be viewed as HRM decisions, capable of enhancing individual and organizational performance.

METHODOLOGY
INTRODUCTION
The modern workforce is constantly evolving, and with it, the concept of professional and personal life balance has become increasingly critical. Labour laws play a significant role in shaping the work environment and influencing the work-life equilibrium of individuals. This research aims to delve into the impact of labour laws on work-life balance, exploring the various dimensions and implications.

BACKGROUND
Work-life balance has gained prominence as a critical factor affecting employee satisfaction, productivity, and overall job performance. Labour laws, which rules the alliance between employers and employees, are expected to adapt to these changes and provide a framework that backs professional and personal life balance

OBJECTIVES OF THE STUDY
• To assess the existing labour laws and regulations pertaining to work hours, overtime, and leave policies.
• For determining the impact of labour laws on every individual's ability to maintain a satisfactory professional and personal life balance.
• For finding any gaps or inadequacies in recent labour laws that can affect professional and personal life balance.
• For analysing perspectives of both employers and employees regarding the influence of labour laws on professional and personal life balance.

LITERATURE REVIEW
A comprehensive review of existing literature will be conducted to gain insights into the historical development of labour laws, their intended purpose, and their effectiveness in addressing work-life balance concerns. This section will also explore any previous research findings on the relationship between labour laws and work-life balance.

RESEARCH DESIGN
The research design is an approach of mixed method approach. This approach generally means to combine both methods - qualitative and quantitative methods to provide a deep knowledge on effects of labour law
on professional and personal life balance. This design is chosen to capture a broad range of perspectives, experiences, and data. Surveys, Questionaries, and document analysis will be used to collect data.

MEASUREMENTS
The study measures the effect of professional and personal balance life and Employee Wellbeing work alongside its dimensions on performance of employee. The instruments used in the study include past research works, books, references. The above stated ones are the secondary sources. The questionnaire is chosen as primary source of gathering the data. The research has been carried out on two aspects majorly:

THEORETICAL REVIEW OF LITERATURE
- Over 30 Literature have been keenly reviewed to understand the impact ranged behind professional and personal life balance balance and relatively the impact of labour law behind the balance required between professional and personal life of employees.
- The review has also been conducted on the various practices followed by various organization for welfare of the employees and their well-being during their course of employment in the respective organization.

Findings
Compliance with Labour Laws: Through a comprehensive analysis of labour laws, it was found that there is a significant gap between legislation and its implementation across various industries. While labour laws may exist to promote work-life balance and employee wellbeing, enforcement mechanisms are often lacking or ineffective.
Employee Perception: Surveys conducted among employees revealed mixed perceptions regarding the effect of labour laws on their professional and personal balance life and wellbeing of employee. Many employees reported feeling pressured to work long hours despite legal protections, citing concerns about job security and advancement opportunities.
Employer Practices: Examination of employer practices indicated a wide range of approaches to compliance with labour laws. While some organizations prioritize work-life balance initiatives and adhere strictly to legal requirements, others exploit loopholes or engage in practices that undermine employee wellbeing.
Impact on Vulnerable Groups: Vulnerable groups such as low-wage workers, women, and migrant workers are disproportionately affected by gaps in labour laws. These individuals often face precarious working conditions, limited access to benefits, and inadequate protections against exploitation, exacerbating challenges related to work-life balance and wellbeing.

Conclusion
Despite the existence of labour laws aimed at promoting work-life balance and employee wellbeing, their effectiveness remains limited due to inadequate enforcement, employer practices that prioritize profit over employee welfare, and disparities in protection for vulnerable groups. Addressing these shortcomings requires a multi-faceted approach involving stronger enforcement mechanisms, increased transparency in labour practices, and targeted support for marginalized workers.
Suggestions
Enhanced Enforcement: Strengthen enforcement mechanisms to ensure compliance with labour laws, including regular inspections, penalties for non-compliance, and mechanisms for reporting violations anonymously.

Promotion of Best Practices: Encourage employers to adopt best practices for promoting work-life balance and employee wellbeing through incentives, recognition programs, and industry standards.

Education and Awareness: Increase awareness among employees about their rights under labour laws and provide resources for accessing support and reporting violations.

Support for Vulnerable Groups: Implement targeted interventions to support vulnerable groups, including improved access to healthcare, childcare, and legal assistance, as well as measures to address discrimination and exploitation in the workplace.

Collaborative Efforts: Foster collaboration between government agencies, employers, trade unions, and civil society organizations to develop comprehensive strategies for promoting professional and personal balance life and well-being of employee at both the policy and organizational levels.

By implementing these recommendations, policymakers, employers, and other stakeholders can work together to create supportive working ambience that prioritizes the well-being of all workers.
