Abstract:

Speed humps are the traffic calming devices and are extensively used to reduce traffic speed on local streets. Conventional speed breakers are made up from concrete or asphalt. Apart from traffic calming these have many dis-advantages like wear & tear of vehicle components, noise pollution, health issues like back paining, distress experienced by driver etc.

To overcome these limitations non-Newtonian fluid Speed humps are thought of better alternative. This paper aims to represent public perception and acceptance analysis of oobleck breaker through data collected from survey of more than 1000 vehicles & 220 recorded responses including two-wheeler, three-wheeler and four-wheeler normal as well as heavy loaded vehicles.

Keywords: Non-Newtonian fluid, speed breaker, road safety, viscosity, durability, simulation, Public Perception, etc.

1. Introduction:

Public perception is simply the type of information obtained from a public opinion survey. That is, “public opinion” is merely the aggregate views of a group of people who are asked directly what they think about particular issues or object. In engineering, what the public knows and thinks can have important implications for the design and the success of the various systems and activities and that are loosely termed industrial ecology. Analysis in the context of non-Newtonian fluid speed breakers and public perception studies is crucial for several reasons few are listed below:

Effectiveness Evaluation: Analysis helps determine the effectiveness of Non-Newtonian fluid speed breakers in comparison to traditional speed breakers. By analyzing factors such as vehicle speed reduction, road safety improvement, and wear and tear on vehicles, authorities can assess whether these innovative solutions are delivering the desired results.

Cost-Benefit Analysis: Understanding the cost implications of implementing non-Newtonian fluid speed breakers compared to conventional ones is essential. Analysis can help ascertain whether the potential benefits, such as reduced maintenance costs or fewer accidents, outweigh the initial investment required for installation.

Public Perception: Analyzing public perception towards Non-Newtonian fluid speed breakers is vital for

their successful adoption. This involves understanding factors such as perceived effectiveness, safety concerns, and overall satisfaction among road users. Such analysis can inform policymakers about the acceptance level of these unconventional solutions and help tailor communication strategies accordingly.

Safety Assessment: Analyzing the safety aspects of Non-Newtonian fluid speed breakers is paramount. This includes assessing their impact on vehicle stability, braking distance, and potential hazards for vulnerable road users such as pedestrians and cyclists. Through thorough analysis, authorities can ensure that these speed breakers enhance road safety without introducing new risks.

Environmental Impact: Analyzing the environmental implications of Non-Newtonian fluid speed breakers is essential in promoting sustainable transportation solutions. This involves assessing factors such as energy consumption during production, material recyclability, and potential pollution from fluid leakage. By conducting comprehensive analysis, policymakers can ensure that these innovations align with environmental goals.

2. Survey:

To carry out public perception study rigorous survey for about 15 days was carried out in moderately populated area of city. The oobleck speed breaker was installed with the help of metal strips and nut bolts at such a location that we can grab good volume of vehicles of each category and at the same time we can request driver to answer questions from our survey sheet and note down their response without disturbing remaining traffic & pedestrians.

To note down responses questionnaire of eleven questions was developed. Out of eleven questions eight questions were regarding problems regarding conventional speed breaker. These questions addressed views concerning safety, durability, visibility, discomfort, vehicle damage, noise pollution & vibrations. The drivers were asked questions regarding their experience when their vehicle traverse over speed breaker and rate this new speed breaker according to their perception as good, average or poor. Remaining three questions were general questions about necessity of speed breakers and acceptance of new speed breaker and response to them was noted as yes or no.

During 15 days more than 1000 vehicles passed over the speed breaker out of which 220 responses were tabulated for further analysis. For each question chart is created to graphically represent the overall response of survey. The questionnaire developed is shown below in figure no. 1 whereas tabulated Reponses are represented in table no 1 below

CIVIL ENGINEERING DEPARTMENT

Name Of Driver:

Date:

Type Of Vehicle: 2-Wheeler / 4-Wheeler

Sr. No.	Questions	Good	Average	Poor
01	Rate your experience regarding walking, cycling, or driving in the vicinity of the speed breaker(s)?			
02	Tell your experience when your vehicle passes over the speed breaker at low speeds?			
03	Compare this non-Newtonian speed breaker to traditional speed breakers in terms of adaptability to traffic flow?			

04	In terms of durability, rate non-Newtonian speed breakers compared to traditional speed breakers?			
05	Rate about discomfort or vehicle damage experienced due to the speed breaker?			
06	Rate experience regarding increase in noise or vibration from vehicles passing over the speed breaker(s)?			
07	Rate your experience about this Non-Newtonian Speed Breaker regarding visibility?			
08	Rate experience about change in your behaviour as driver or other drivers' behaviour since the installation of the speed breaker(s)?			

Sr No.	Question	Yes	No
01	Did this speed breaker cause any problems for your vehicle?		
02	Can this speed breaker be used in daily life?		
03	Do you believe the speed breaker(s) are necessary to improve road safety?		

Do you have any suggestions or recommendations for improving the design or placement of the speed breaker?

Table 1: Recorded responses

Analysis of data

A. Driving in the vicinity of the speed breaker with low speed

Most of the drivers found it exiting the driving over the oobleck speed breaker. As drivers didn't require to apply breaks to reduce speed for traversing over speed breaker, they just had to maintain constant design speed, their response was good. Few drivers who tried to traverse speed breaker at high speed experienced a jerk.

Rate your experience regarding walking, cycling, or driving in the vicinity of the speed breaker(s)?			
Response →	Good	Average	Poor
Vehicle Type ↓			
2 Wheeler	101	18	4
3 Wheeler	29	4	1
4 Wheeler	53	8	2

A) Rate your experience regarding walking, cycling, or driving in the vicinity of the speed breaker(s)?

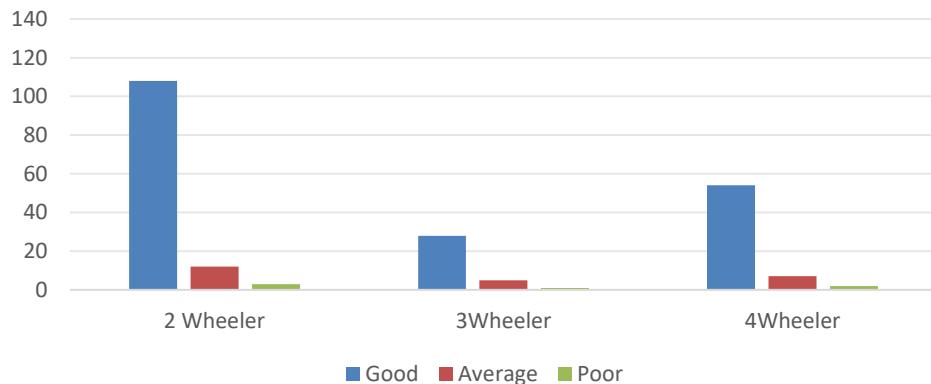

B. Adaptability to traffic flow

More than 1000 vehicles passed over speed breaker within 15 days. These vehicles included bikes, scooters, cycles, auto rikshaws, light weight four wheelers like cars and heavy weight vehicles like truck, tempo etc. this shows adaptability to traffic flow.

How will you compare this non-Newtonian speed breaker to traditional speed breakers in terms of adaptability to traffic flow?

Response →	Good	Average	Poor
Vehicle Type ↓			
2 Wheeler	108	12	3
3 Wheeler	28	5	1
4 Wheeler	54	7	2

C) Compare this non-Newtonian speed breaker to traditional speed breakers in terms of adaptability to traffic flow?

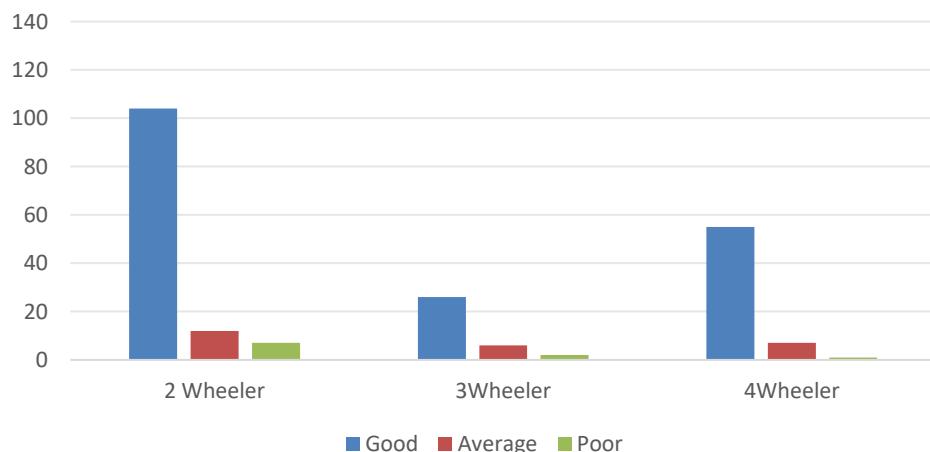

C. Durability of speed breaker

More than 1000 vehicles including bikes, scooters, cycles, auto rikshaws, light weight four wheelers like cars and heavy weight vehicles like truck, tempo etc passed over speed breaker within 15 days. No damage, cracks or spilling out of material was observed.

In terms of durability, how would you rate non-Newtonian speed breakers compared to traditional speed breakers?

Response →	Good	Average	Poor
Vehicle Type ↓			
2Wheeler	104	12	7
3Wheeler	26	6	2
4Wheeler	55	7	1

D) In terms of durability, how would you rate non-Newtonian speedbreakers compared to traditional speed breakers?

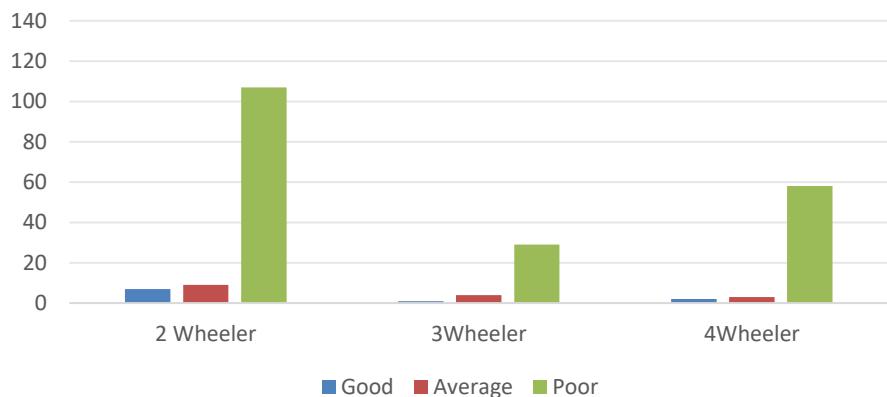

D. Discomfort or vehicle damage

When a constant speed less than design speed is maintained, vehicle passes smoothly over speed breaker without any discomfort. Also, even if ground clearance of few cars is less, there is no wear and tear car components as hump gets adjusted with low speed of vehicle. Most of the drivers rated experience as poor.

Rate about discomfort or vehicle damage due to the speed breaker?			
Response →	Good	Average	Poor
Vehicle Type ↓			
2 Wheeler	7	9	107
3 Wheeler	1	4	29
4 Wheeler	2	3	58

E) Rate about discomfort or vehicle damage experienced due to the speed breaker?

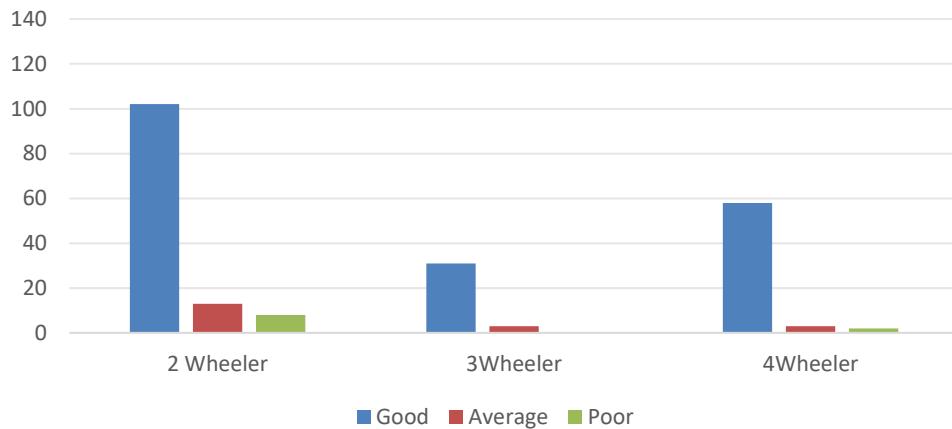

E. Visibility:

As the speed breaker is painted with black and neon yellow strips it is visible from considerable distance at the time of night also.

How do you rate this Non-Newtonian Speed Breaker regarding visibility?			
Response →	Good	Average	Poor
Vehicle Type ↓			
2 Wheeler	102	13	8
3 Wheeler	31	3	0
4 Wheeler	58	3	2

F) Rate experience of this Non-Newtonian Speed Breaker regarding visibility

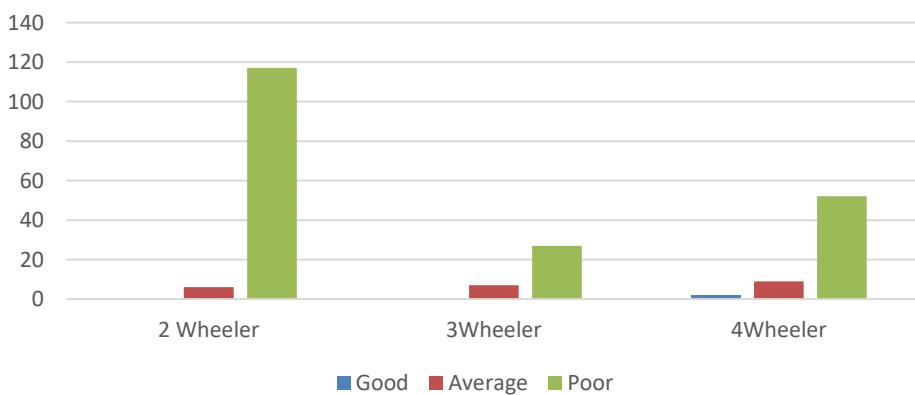

F. Increase in noise or vibration

If speed is maintained below design speed no noise and vibrations are created as no need to apply breaks to reduce speed. Hence most of the drivers reported increase in speed and vibrations as poor

Have you noticed any increase in noise or vibration from vehicles passing over the speed breaker(s)?

Response →	Good	Average	Poor
Vehicle Type ↓			
2 Wheeler	0	6	117
3 Wheeler	0	7	27
4 Wheeler	2	9	52

Have you noticed any increase in noise or vibration from vehicles passing over the speed breaker(s)?

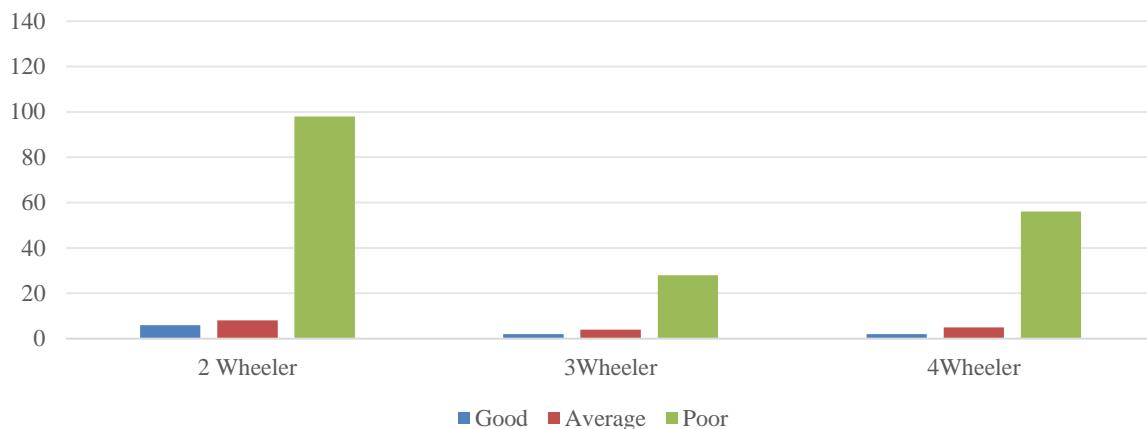

G. Changes in drivers' behaviour

No change in drivers' behavior was observed as less fatigue is produced. Hence this criterion was recorded as poor

Have you noticed any changes in your behaviour as driver or other drivers' behaviour since the installation of the speed breaker(s)?			
Response →	Good	Average	Poor
Vehicle Type ↓			
2 Wheeler	6	8	98
3 Wheeler	2	4	28
4 Wheeler	2	5	56

H) Rate experience about change in your behaviour as driver or other drivers' behaviour since the installation of the speed breaker(s)?

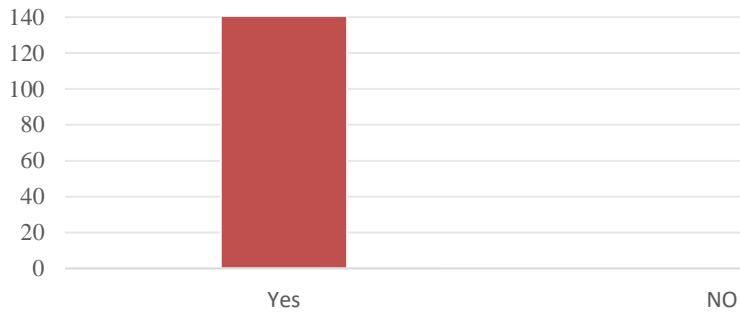

H. Acceptance analysis

Did this speed breaker cause any problems for your vehicle?	
Yes	NO
0	220

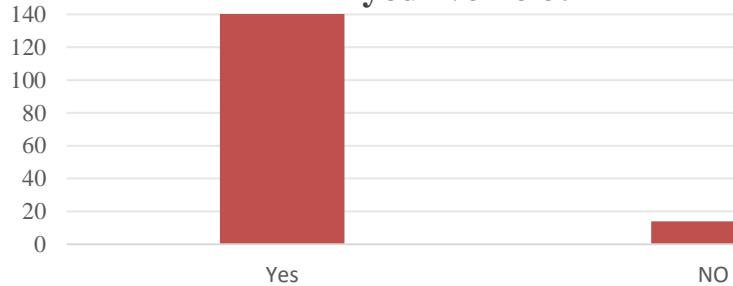

A. Did this speed breaker cause any problems for your vehicle?

Can this speed breaker be used in daily life?	
Yes	NO
220	0

Can this speed breaker be used in daily life?**Do you think speed breakers are necessary?**

Yes	NO
206	14

Did this speed breaker cause any problems for your vehicle?

3. Conclusion

1. From the study done on the behavior of oobleck it was found out that the speed breaker works fabulously on the actual site.
2. As oobleck is used as a speed breaker material it helps to reduce the shock absorption capacity.
3. We are on the conclusion that, the discomfort or vehicle damage due to speed breaker non-Newtonian (oobleck) is low.
4. We have noticed that the noise or vibration from vehicle passing over the speed breaker as comparative to conventional was less.
5. Non-Newtonian speed breaker can be used in daily life.

4. Future scope

Public perception study and analysis showed that oobleck speed breaker can be effectively used to

overcome shortcomings of traditional speed breaker which includes reduction in wear & tear of mechanical components of vehicles noise reduction. reduction in heath issues related to back pains, driver's fatigue etc. yet to accept these on actual field some aspects need keen attention Few aspects are written below

1. Environmental Impact analysis of various non-Newtonian fluid samples to be used as speed breaker material should be conducted to check weather considered materials are environmental friendly or not.
2. Study the effect of non-Newtonian fluid speed breakers on vehicle dynamics by analyzing the changes in vehicle speed, suspension behavior and overall stability as vehicles pass over the speed breakers.
3. Experimental Study of various Non-Newtonian Fluids by Conducting laboratory experiments to measure relevant properties of these fluids under different loading conditions and different speed limits.
4. Preparing a prototype and testing the same for varying conditions of load, density and velocity
