Self Concept of Learning Disabled Secondary Students

Dr. Laxmidhar Dey
Assistant Professor, Asst. Professor in Education, D.D. B.Ed, COLLEGE, W.B.

ABSTRACT:
Study of self concept of learning disabled secondary students is the “Title” of the study. To study self concept of Learning Disabled Students and Normal students is the objective of the study. The sample of the study consists of 2000 (two thousand) secondary school students. Out of which 1752 are normal students and 248 are Learning disabled students. Check list for identifying learning disabled students, Socio Economic Test , Mental Ability Test , self concept Test were used as Tools of collection of data .The findings states that (1) 10.38%, 52.05%, 37.5% Normal students and 7.60%, 47.58% and 44.75% learning disabled students possess high, average and low concept formation (2) The normal students possess high self concept than the learning disabled students. (3) Male & Female learning disabled students possess equal self concept. (4) High intellectual students possess higher self concept than that of the Low Intelligent student. (5) High & Low socio-Economic Learning disabled students possess same self concept.

Keywords: Self Concept, Learning Disabled, Socio Economic, Intellectual, Secondary

INTRODUCTION:
Education is the reconstruction of experiences of learners. It helps to develop cognitive, affective, psychomotor qualities of the learners. It attempts to promote reasoning, thinking, understanding, power of judgement, memory, perception, attitude, interest and motive of the Learners. It makes the learners good effective and creative citizens of nation in the future. Without education man cannot exist as a human being in the society. Our constitution of India has granted equality of educational opportunities to the children with special needs. Our great thinkers and administrators have suggested certain special educational provision for the exceptional children. At present inclusive education set up are recommended for the disabled children. Some studies reveal that, Learning disabled children Lag behind in achievement than the normal students due to psychological and emotional problems which affect their learning and motivation in the classroom. They do not profit much in the inclusive setup due to their deficiencies in reading, writing, speaking and Mathematical ability.

The present study has been under taken by the investigator on the Learning Disabled students.

OBJECTIVES OF THE STUDY :
1. To study the levels of self concept of normal & learning disabled students.
2. To study the self concept of normal & learning disabled students.
3. To study the self concept of learning disabled students with reference to their Sex, IQ and Socio-economic status.
1.9.0 HYPOTHESIS:
The following are the based on this hypothesis of the study.
1. All the normal & learning disabled children do not belong to different levels of self concept.
2. There is no significant difference in the Mean self concept test scores of normal & learning disabled students.
3. There is no significant difference in the Mean self concept test scores of normal & learning disabled students.
4. There is no significant difference in the Mean self concept test scores between high & low intelligent learning disabled students.
5. There is no significant difference in the mean self concept test scores of high scores & low socio-economic status learning disabled students.

SAMPLE OF THE STUDY
Purposive sampling method was used for the study. The sample of the study consists of 2000[two thousand] secondary school ix students in the district of Balasore, Odisha. Out of which 1752 are normal students and 248 are learning disabled students.

TOOLS USED FOR THE STUDY
In order to obtain the desired data for the present study, Various tools are used.
- Check list for identifying the Learning Disabled students.
- Socio-Economic Status[S.E.S] scale
- Mental Ability Test
- Self concept Test

ANALYSIS AND INTERPRETATION:
1. STUDY OF LEVEL OF SELF CONCEPT OF NORMAL AND LEARNING DISABLED STUDENTS.
The hypothesis states that all the normal and learning disabled students do not belong to different levels of self concept. Keeping this hypothesis in mind, the self concept standard scores were analysed with the help of percentage. The result are given in the table-1.

<table>
<thead>
<tr>
<th>Levels of self concept among normal students</th>
<th>Levels of self concept among learning disabled students</th>
</tr>
</thead>
<tbody>
<tr>
<td>Levels</td>
<td>Range of Standard scores</td>
</tr>
<tr>
<td>High self concept</td>
<td>53 to 77</td>
</tr>
<tr>
<td>Average self concept</td>
<td>43 to 52</td>
</tr>
<tr>
<td>Low self concept</td>
<td>18 to 44</td>
</tr>
</tbody>
</table>
“All the normal & learning disabled students do not belong to different levels of self concept” is not rejected. 10.38%, 52.05%, 37.5% normal students belong to High average and low levels of self concept, and 7.66%, 47.58% and 44.75% learning disabled students belong to High, Average & Low Levels self concept respectively.

2. STUDY OF SELF CONCEPT OF NORMAL AND LEARNING DISABLED STUDENTS.

The hypothesis states that, there no significant difference in the Mean self concept Test scores of normal and learning disabled students Keeping this hypothesis in mind, the data were analysed with the help of ‘t’ test. The results are given in the following table no.-2.

<table>
<thead>
<tr>
<th>Variable</th>
<th>Group</th>
<th>N</th>
<th>Mean</th>
<th>SD</th>
<th>t-ratio</th>
<th>Levels of significance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self Concept</td>
<td>Normal Children</td>
<td>1752</td>
<td>64.14</td>
<td>12.54</td>
<td>5.48</td>
<td>.01</td>
</tr>
<tr>
<td></td>
<td>Learning Disabled</td>
<td>248</td>
<td>59.86</td>
<td>11.48</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The mean scores of normal and learning disabled students on self concept test are 64.18 and 59.86 with SD’s 12.54 and 11.48 and t-ratio of above two groups is 5.48 , The result states that, there is significant difference between normal and learning disabled children on self concept test scores. In other words the self concept of normal children is better than that of the learning disabled students.

3. TO STUDY THE DIFFERENCE IN THE SELF CONCEPT OF MALE AND FEMALE LEARNING DISABLED STUDENTS.

The hypothesis states that, there is no significant difference in the Mean self concept test scores between male and female learning disabled students. Keeping this hypothesis in mind, the data were analyzed with the help of ‘t’ test. The results are given in the following table no.-3.

<table>
<thead>
<tr>
<th>Variable</th>
<th>Group</th>
<th>N</th>
<th>Mean</th>
<th>SD</th>
<th>t-ratio</th>
<th>Level of significance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self Concept</td>
<td>Male</td>
<td>120</td>
<td>64.10</td>
<td>13.69</td>
<td>24</td>
<td>N.S</td>
</tr>
<tr>
<td></td>
<td>Female</td>
<td>128</td>
<td>64.52</td>
<td>12.9</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The result states that, mean score of male and female students on self concept test do not differ significantly from each other. It means the self concept of male and Female Learning Disabled students are similar.
4. TO STUDY OF DIFFERENCE IN THE SELF CONCEPT OF HIGH AND LOW INTELLIGENT LEARNING DISABLED STUDENTS.

The hypothesis states that, there is no significant difference in the Mean self concept test scores of high and low intelligent learning disabled students. Keeping this hypothesis in mind, the data were analyzed with the help of ‘t’ test. The results are given in the following table no - .4

<table>
<thead>
<tr>
<th>Variable</th>
<th>Group</th>
<th>N</th>
<th>Mean</th>
<th>SD</th>
<th>t-ratio</th>
<th>Levels of significance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self Concept</td>
<td>High IQ</td>
<td>56</td>
<td>66.48</td>
<td>12.70</td>
<td>3.93</td>
<td>.01</td>
</tr>
<tr>
<td></td>
<td>Low IQ</td>
<td>34</td>
<td>56.24</td>
<td>11.52</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The result states that, there is significant difference between high and low intelligent learning disabled students. Mean self concept test score of high intelligent learning disabled students is better than that of low intelligent learning disabled students.

5. TO STUDY OF DIFFERENCE IN THE SELF CONCEPT OF HIGH AND LOW SOCIO-ECONOMIC STATUS LEARNING DISABLED STUDENTS.

The hypothesis states that, there is no significant difference in the Mean self concept test scores of high and low socio-economic status learning disabled students. Keeping this hypothesis in mind, the data were analyzed with the help of ‘t’ test. The results are given in the table no 5

<table>
<thead>
<tr>
<th>Variable</th>
<th>Group</th>
<th>N</th>
<th>Mean</th>
<th>SD</th>
<th>t-ratio</th>
<th>Level of significance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Self Concept</td>
<td>High SES</td>
<td>63</td>
<td>64.35</td>
<td>13.18</td>
<td>2.74</td>
<td>.01</td>
</tr>
<tr>
<td></td>
<td>Low SES</td>
<td>78</td>
<td>58.40</td>
<td>12.41</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The result states that there is a significant difference between high and low socio-economic status on self concept test scores. It means the high socio-economic status Learning Disabled Students are better than the low socio-economic status learning disabled students on – Self Concept.

FINDING

10.38%, 52.05%, 37.5% Normal students and 7.66%, 47.58% and 44.75% learning disabled students possess high, average and low self concept (2) The normal students possess high self concept than the learning disabled students. (3) Male & Female learning disabled students posses equal self concept. (4) High intelligent Learning Disabled students possess higher self concept than that of the Low Intelligent Learning Disabled student. (5) High & Low Learning Disabled socio-Economic status students posses same self concept.
SUGGESTION:
1. The study was conducted on IXth standard students. Similar studies may be carried out in other classes.
2. The study was confined to Balasore district, Odisha. Similar study may be conducted in other districts and states.
3. The study may be extended to other sub-samples based on local and socio-economic status.
4. The influence of management private school on learning disability of children can be explored.
5. The present study was focused on Learning Disabled Students. It may be extended to other categories of exceptional children such as intellectually, emotionally, physically & socially exceptional.
6. Role of the parents in the remediation of learning disability can be studied.
7. The same study may be conducted on a large sample in the future.
