

Introduction of a New Constant: Conscience (aum), THE THEORY OF CREATION

Ms. Bitasta Dasgupta

We are not unknown to the numerous theories and laws of physics and philosophy. From Sigmund Freud to sir Albert Einstein, Einstein dreamed to create a unified theory or rather equation, “god doesn’t play dice” right? He wanted to connect the quantum world with cosmology, but there it was Heisenberg’s uncertainty theorem and Schrodinger equation, the quantum entanglement and string theory. The 2nd law of thermodynamics and the ever-expanding universe. In this article or rather I would love to say thesis, I am going to prove everyone right. how? Below is the explanation from the very beginning. Beginning of what? The universe?

- NO. The beginning, the creation and how the whole world works and to clear the confusion and ever lasting debate of scientists.

1. THE WRAPPER THEORY:

Here we are talking about the before creation, what was there before creation? we have made multiple theories of creation but in order to know the NOW, we have to dive in THEN. Before creation there was abstraction. Let me give an analogy to it, we humans have brain, body and all those hormones and neurotransmitter, but what separates us? conscience. But the ultimate made us the way that even that conscience is limited, we will come to that later, but here, can we touch conscience? Can we call it a particle or wave or string? NO. conscience is abstraction. Now coming back to topic, before creation there lied, unconscious wrapped by ultimate unconscious

The unconscious is not like a dead body, its like a state of coma, it do have a presence waiting for trigger. Whereas the ultimate unconscious is dead, nothing can ever trigger it, mind me, there are no dimensions here just abstraction. This state of unconscious starts to manifest itself, we can call it efforts leading to diminishing its size, so what is the geometry here, in one word (superfluid), ever changing geometry but only “change” that we see is – its getting smaller and smaller (increased entropy, more chaos), the ultimate unconscious takes over.

Then there it is, the glitch, the singularity, the egg. Creation starts from here, the egg, chaos reaches infinity, the energy reaches its highest point and then BOOM!

THE BIG BANG!

2. THE CYCLE: The ultimate cycle of creation, perseverance, and destruction. There are multiple universe we are one of them, in our case our universe expands, maybe the other don’t expand. So when we say birth and death, doesn’t necessarily mean what it looks like, how can we die if we are never born? we were always there, and what do I mean by “we”? the conscience, which have infinite dimensions, all species have conscience, but humans somehow are a glitch, we are given one extra dimension – self consciousness. But the ultimate is a clever one. He thus limited us, but making us a way that we can have self consciousness but it will always be covered with ego. see! The wrapper is here as well. A man

may have 290+ IQ , ultimate EQ , metaconsciousness , but what can be done when we are the mere spectators who are shown the reality to a limit . say , the black hole is also a glitch , humans can get in there hypothetically may enter singularity but he is going to lose his ego , not to mention the body , that singularity is the closed door , what transcends the closed door? Not self consciousness but conscience . Einstein's block theory was rejected but it is true though , yes everything is decided , pre-determined . The whole universe , multiverse , the quanta , the photon everything is conscious . And that is the link between quantum mechanics and the cosmos.

3. WHAT IS UNCERTAIN (PROBABLE) : who is watching? Who was watching? Who will be watching? The creation was there , but who was there to watch ? or even was he there?

Thus we do have free will but chained by certain limitations of human mind .

4. GOD : The infinite dimension , space time is just a fraction of it , no mathematics or physics can comprehend that . Maybe god is our ultimate conscience , haha!

there is always a balance , every destruction can lead to creation , so the space is never ending because the ultimate unconscious will balance out the conscious , what can end is maybe trillions and trillions of years later , our universe but wait? Destruction is creation , creation is destruction and this is god .

god never played dice , he was there from the very creation , the spectator untouched by ego , that formless geometry . But the most chilling question, who was there before creation ,before gods ? who watched ? or was there anyone to watch at all? Ya Heisenberg u are right !!
